ENG Installation and operating instruction

1. General

This manual is for the Flexcon PA AutoFill with Flexcon PA App. The package includes a Flexcon PA AutoFill (A), Flexcon PA App (B), a 12V AC/DC adapter (C) and a 12V/24V power cable (D). The FFFF-GFF (E), a straight coupling FF GFF (F), a shut-off valve 1/4" x 1/4" (G) and a manual (H) (fig. 1).

Safety

• Risk of electrical shock! Care must be taken with electronics in combination with water.

The use of a pressure separator (acc. to EN 1717) is mandatory when using a fixed connection between water mains and the central heating installation. A system separator is not required.

• Do not remove the housing, while product is in use and pressurized.

• Do not cover the Flexcon PA AutoFill with cloth or the AC/DC adapter!

• Do not use the device in locations where there is a risk of explosion.

• Do not install the Flexcon PA AutoFill in a frost-free location and in a location that can easily be accessed for maintenance.

• Do not position the AC/DC adapter in close proximity to a heat source; it should not exceed 40°C.

• Make sure the system pressure is maximum 4 bar, with pressure release valve set to 0.8 bar.

• The reset characteristic for cut-out action is that the system forces the valve to open again.

• Protection against reverse connection is achieved by removing the adapter from the mains or removing the jack cable.

• The device may be classified as purpose of control as pressure limiter with electrically operated valve.

3. Maintenance and service

Regularly carry out a visual inspection. Please refer to the Flexcon PA manual for more information. If available, new firmware for the Flexcon PA can be downloaded from the Flexcon PA App. The Flexcon PA App contains all the information about the device and its operation.

4. De-installation

Unplug power from the device and de-pressure the system before de-installation of the devices. Abide by local regulations when disposing of the product.

5. Safety settings and errors

Quick overview display codes

Display code Action required by user

B/R Replace battery

H Replace expansion vessel, check Flexcon PA App or "Resolve system errors" for more information

E Replace expansion vessel

S Check safety valve

L "Low pressure alarm", top-up needed

L/E Check system, possible leak detected

H System check, reduce system pressure

I/F Check input flow (check Flexcon PA App or "Resolve system errors" for more information)

F/L Top-up mode activated, filling of system

G/E System error

R/E System error

D/E System error

C/E System error
